Source Data Request tool and process improvements

Awareness session for SED

comp·*lead* project – Lucile Marcou
April 2019

AIRBUS

Source Data Request tool and process improvements 2019

The Source Data Request (SDR) template has been enhanced in order to better comply with SED specificities:

- The improvements will permit to manage and follow-up all the SDR in **one unique tool**
- **Visibility** will be improved on the requests addressed to Source Data providers
- **Relevance** of SDR will be assessed by Source Data providers to enable continuous improvement
- **Collaboration** with Engineering with be reinforced thanks to a more **efficient way of working and tracking** (no use of emails of phone anymore)

AIRBUS

Awareness session agenda

1. Source Data Request: new template
2. Source Data Request: new fields
3. Mandatory fields per Source Data provider
4. Evaluation of the request
5. Customization of the cockpit
6. SDR raw data extract
7. Next steps – additional improvements to come

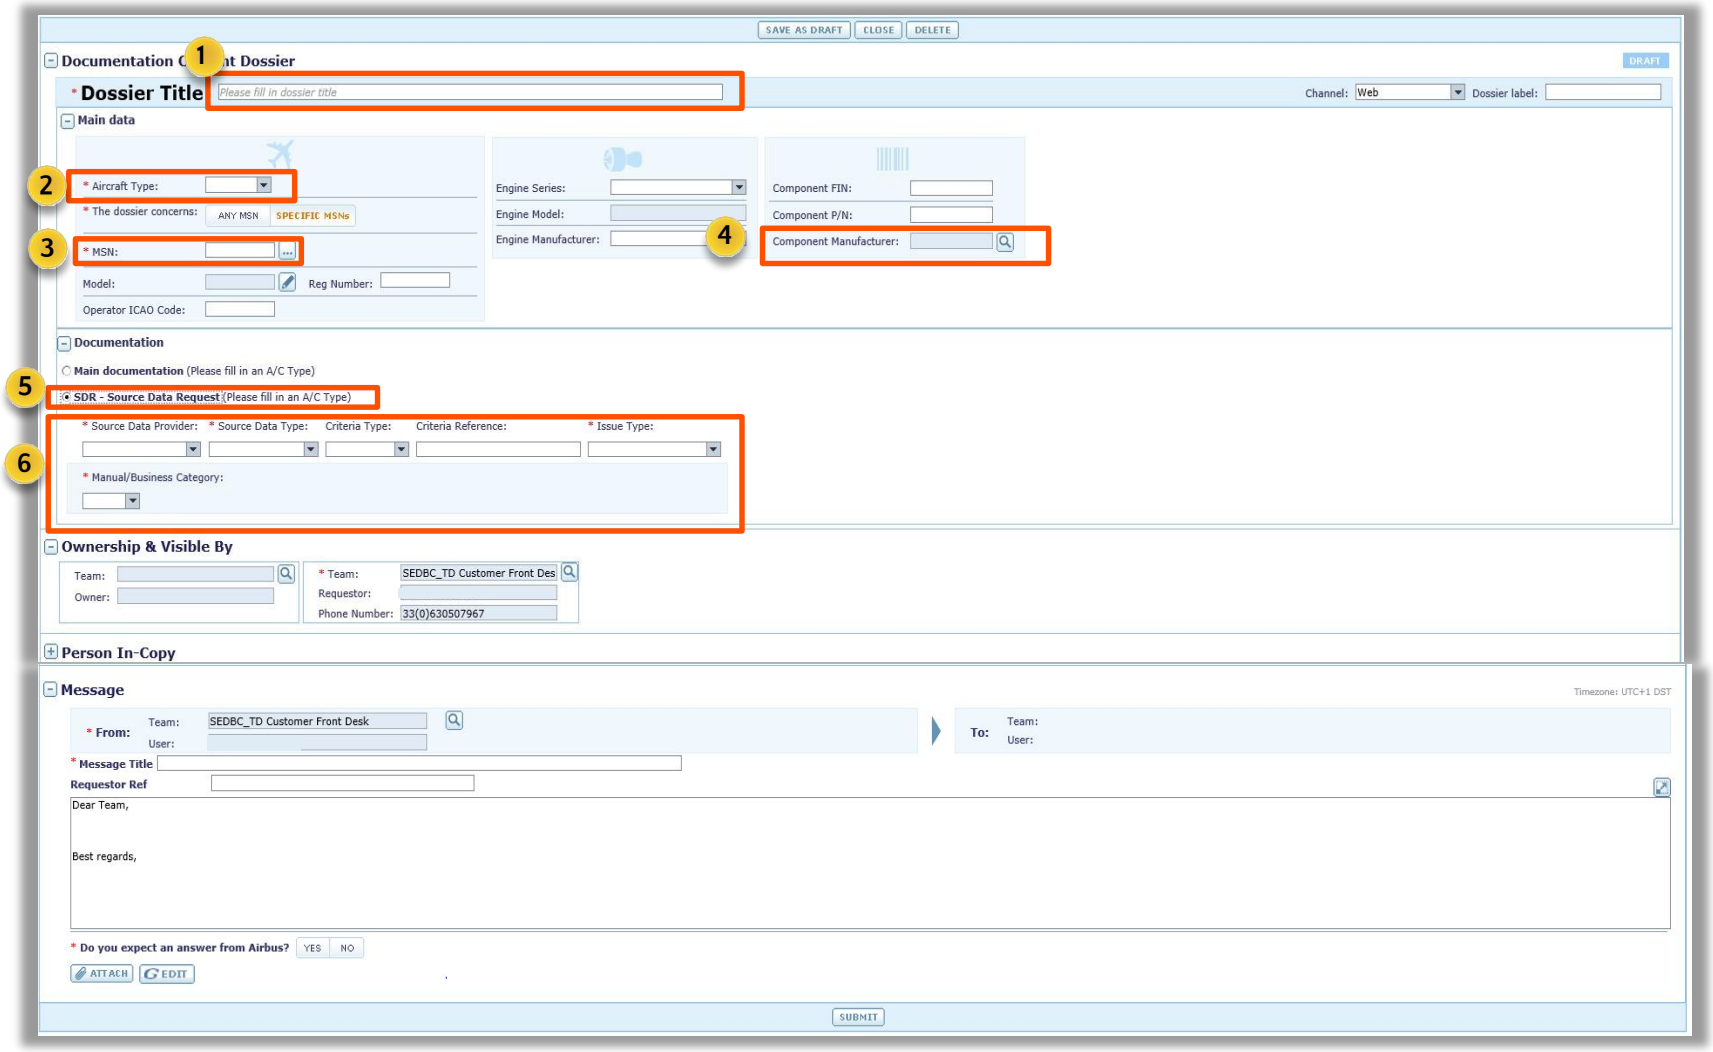
AIRBUS

Source Data Request: New template

The mandatory fields to fill in are:

1. **Dossier title**
   SDR + <impacted P/N or FIN> (if any) + <Short Description of the need>
2. **Aircraft type**
3. **MSN**
4. **Component Manufacturer**
   (Depending of the context)
5. **New "SDR – Source Data Request" radio button**
6. **New SDR fields**

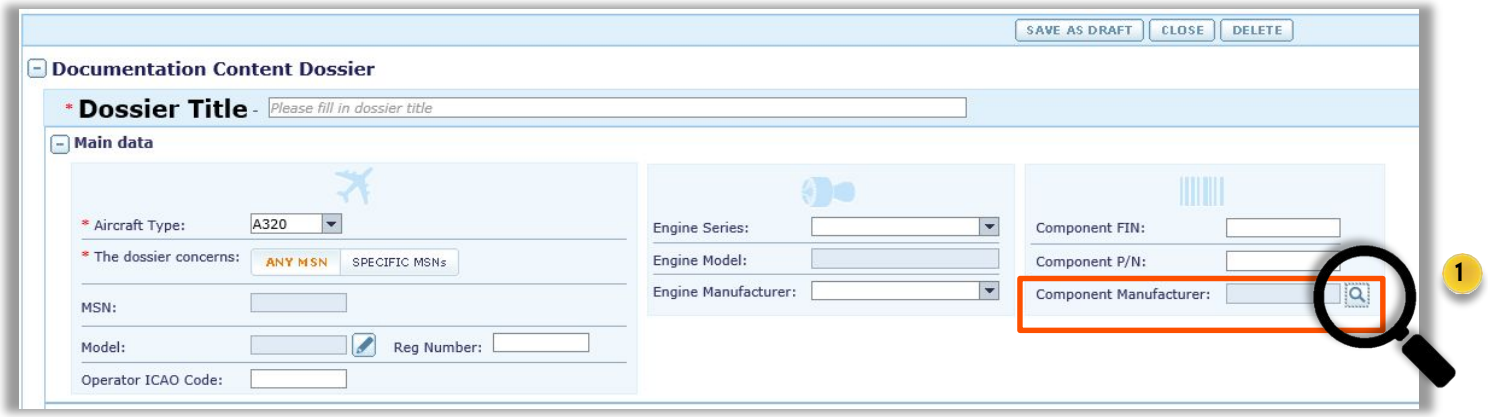
Select "SDR – Source Data Request" to create a SDR and to have the dedicated fields.



Source Data Request: new fields

Component Manufacturer

The "Component Manufacturer" field is mandatory only if the Source Data Provider is "Supplier Data Team"



1 Click on the search-help button

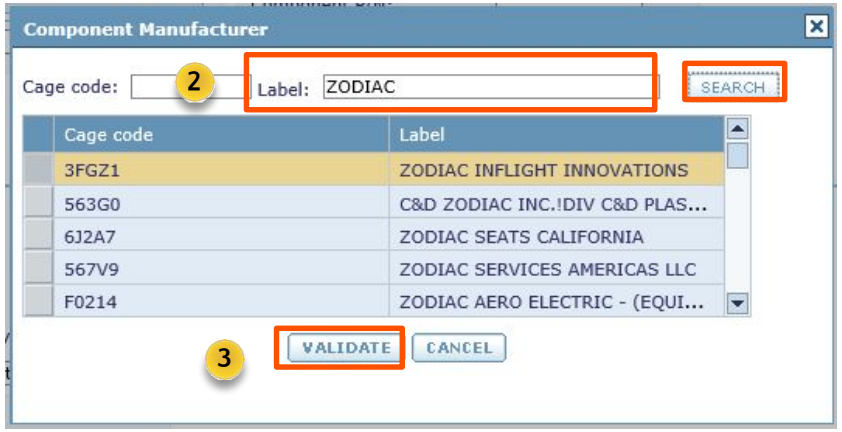
2 **A.** Search per cage code and validate the corresponding entry. The * can be used.

2 **B**. Or search per Supplier name and validate the corresponding entry. The * can be used.

3 Select the right supplier and click on "Validate" button to take into account the selection

Case A:

Case B:

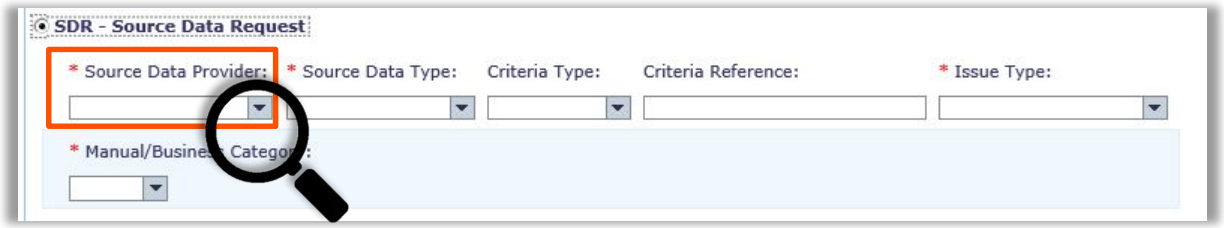


AIRBUS

Source Data Request: new fields

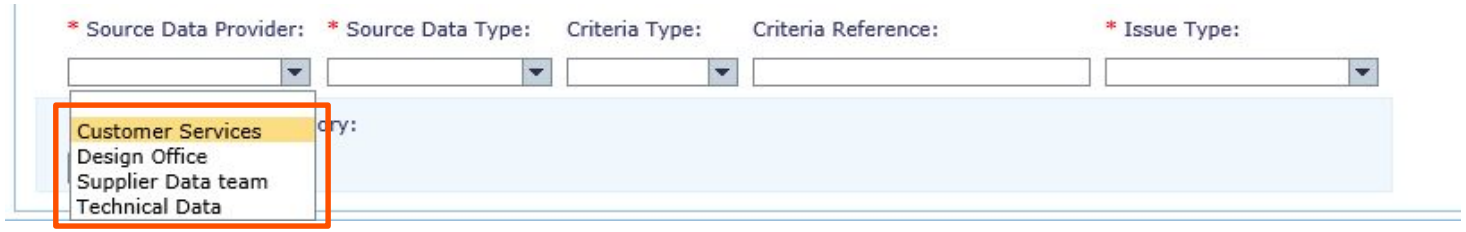
Source Data Provider

The source data provider indicates the owner of the source data or the organization in charge of the deliverable



Select the right Source Data provider in the drop-down list.

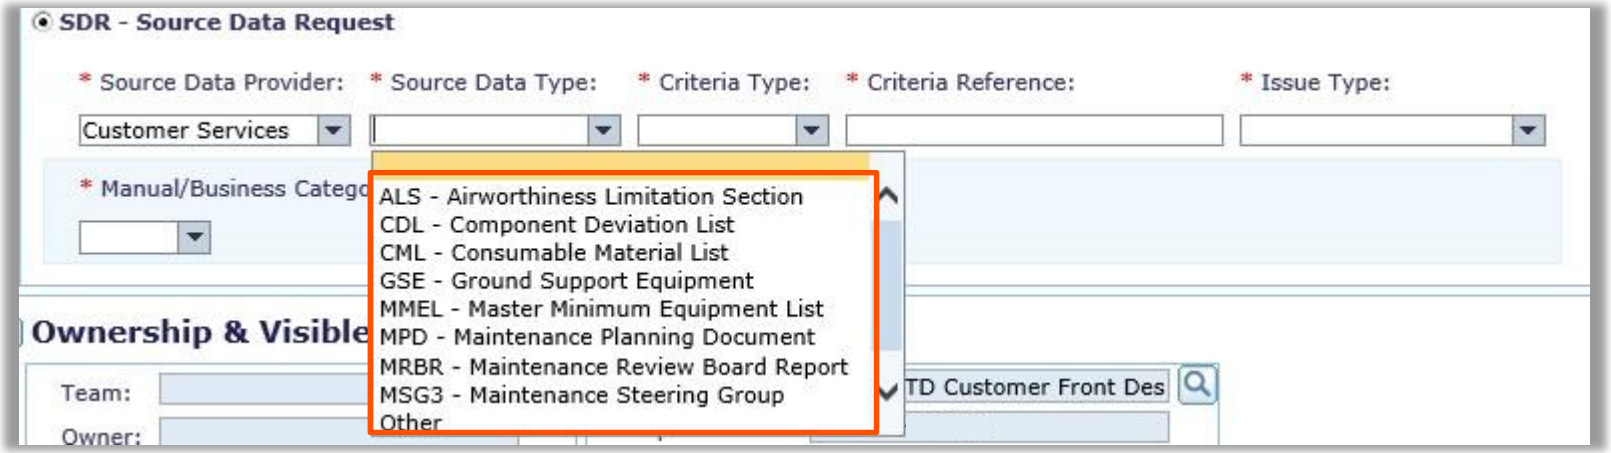
Customer Services is for SEE, SEM, STL
Design Office is for E_N
Supplier Data team is for SEDBV
Technical Data is for SED



Source Data Request: new fields

Source Data type

The source data types depends on the selected Source Data Provider



Select the right Source Data type in the drop-down list.

For example “CDL – Component Deviation List”

2

Source Data Request: new fields

Source Data provider and Source Data type values

	Source Data Type
Design Office	AIPS - Process Specification
	BAABI - Basic Approved ATA Breakdown Index
	BITE - BITE specification
	CAM - Cabin Assignment Module
	CONC - Concession
	DDTN - Design technical Note & Design Instruction
	Design Data Set - Electrical/Mechanical/Structure/Cabin Design Data Set
	DMU - Digital Mock-Up
	DQN - Design Query Note
	EDES - Equipment Definition Evolution Sheet
	ELA - Raw data for Electrical Load analysis
	ELO - Equipment Location overview
	EPD - Extended Principle Diagram
	PD - Principle Diagram
	FD - Functional Diagram
	FDS - Fault Detection Specification
	FIN - Functional Item Number
	GTR - Ground Test Requirements
	ICD - Interface Control Document
	ICY - Interchangeability data
	IFD (EIRD/SIRD/SWRD) - Installation and Functional Design data set
	JCR/DCR - Join Change Request / Design Change Request
	LOD - List of Documents
	MAS - Modification Approval Sheet
	PTS - Purchaser Technical Specification
	SDD - System Description Document
	SID - System Interface Document
	TDD - Technical Design Directive
	TN - Technical Note for AMM (05 - 20), AC, ARFC and ARM
	TRS - Technical Repercussion Sheet
	WD - Wiring Diagram
	Other

Customer Services	ALS - Airworthiness Limitation Section
	CDL - Configuration Deviation List
	CML - Consumable Material List
	Design Drawings (SLU - Upgrade Services)
	GSE - Ground Support Equipment
	MMEL - Master Minimum Equipment List
	MPD - Maintenance Planning Document
	MRBR - Maintenance Review Board Report
	MSG3 - Maintenance Steering Group
	SB - Service Bulletin
	VSB - Vendor Service Bulletin
	Other

Technical Data	CMMm - Component Maintenance Manual manufacturer
	FIN - Functional Item Number
	Subcontractor question
	COC - Customer originated change
	Other

Supplier Data Team	CDF - CDF Set
	LMP - Line Maintenance Part
	CMMv - Component Maintenance Manual Vendor
	VMF - Vendor Maintenance Figures
	WSD - Wiring Source Data
	CML - Consumable Material List
	TDRL item
	Powerplant Procedures
	PIPC/PIPD - Engine Data
	IFE Direct Contribution (IPC/AMM/TSM)
	P/N Creation
	P/N Attributes Update
	P/N Effectivity checks
	Interchangeability creation or checks
	Other

⚠

To request an update of the Source Data type list:
Send an email to SED_SDR, Support 'support.sed_sdr@airbus.com'

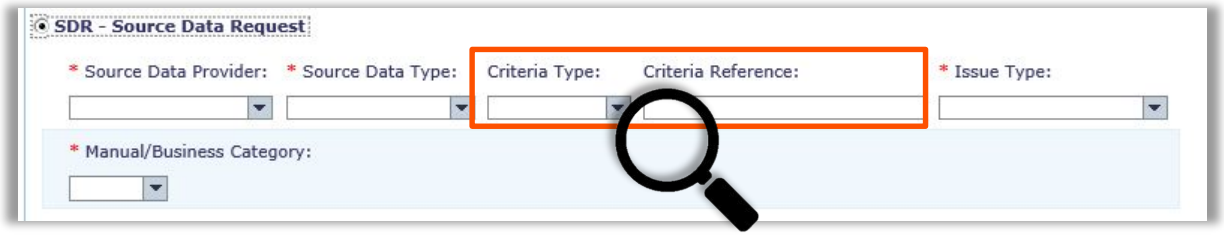
AIRBUS

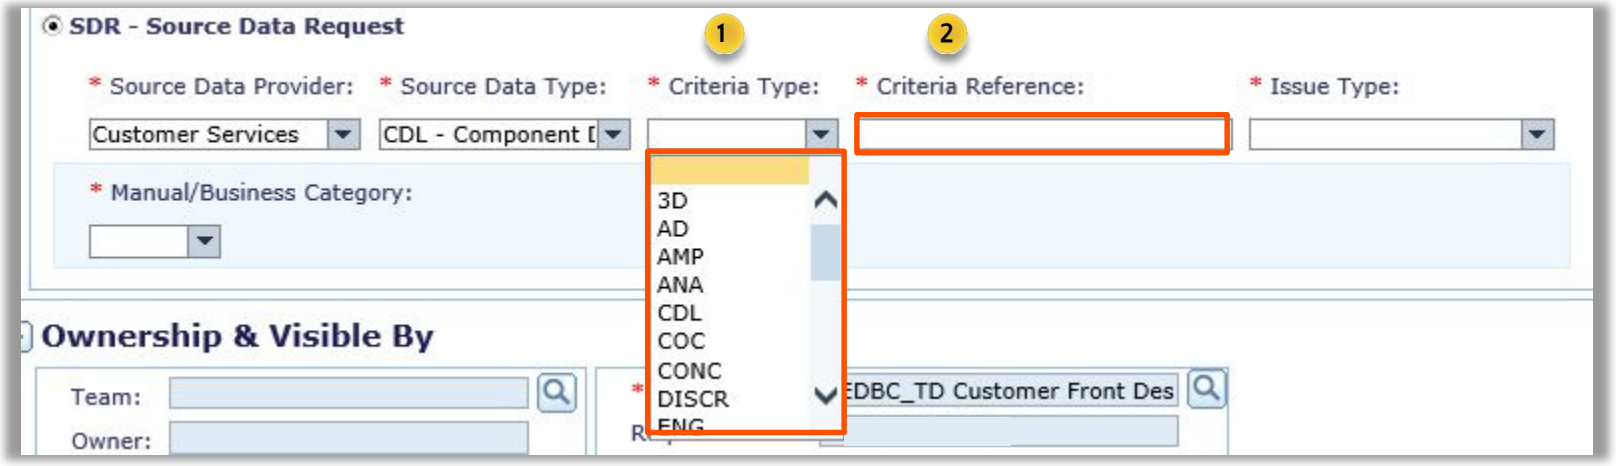
Source Data Request: new fields

Criteria Type and Criteria reference

The Criteria type and reference will help the Source Data provider to understand what was the trigger of the TechData update and to make the link with the associated Source Data

1. Select the right Criteria type in the drop-down list.
   For example: “MPM”
2. And fill-in a criteria reference number.

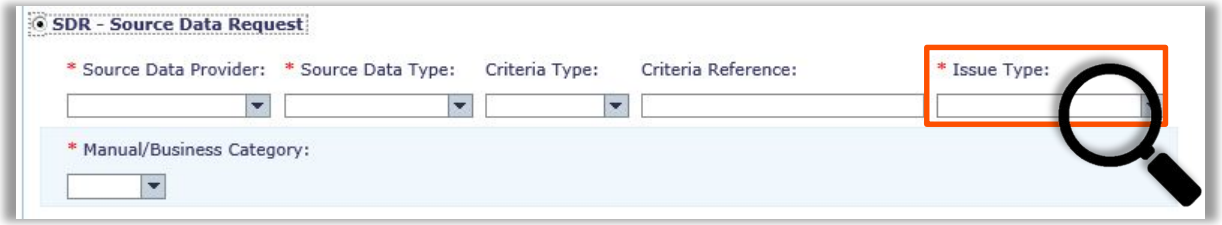




Source Data Request: new fields

Issue Type

The issue type describes the issue on the Source Data to give an information to the source data provider.



Select the right issue type in the drop down list.

For example: "Document not validated"

2

Source Data Request: new fields

Manual/Business Category, ATA and Reference

The Manual/Business Category is now used to indicate the manual for which there is a Source Data issue. SDR has been removed from this list.

1. Select the right Manual/Business Category in the drop-down list. For example "AMM"

2. Type the ATA chapter (4 digits), if it is requested for the selected Manual/ Business Category. If needed, several ATA chapters can be added by clicking on "Add another ATA code".

3. Type the Source Data reference for which there is an issue

Source Data Request: new fields

Way of working at Entry into Service

Slide modified on 17.04.19

EIS – 22/04/19

(New SDR template)

SDR created before EIS date

SDR created from EIS date

SDR identified by « SDR – Source Data Request » radio button selected.

New fields are available and have to be filled

SDR identified by SDR attribute in Manual/Business Category field

New SDR fields will have to be filled if the SDR is updated or reopened.

No legacy has been applied (not feasible) to activate the SDR radio button by default for the SDR created before the EIS date.

To convert a SDR created before EIS into a SDR based on the new template, the SDR has to be **edited**. The user has then to fill-in the mandatory fields (depending of the Source Data Provider selected),

3

Mandatory fields per Source Data provider

SDR FIELDS	SOURCE DATA PROVIDER:			
	Supplier Data Team	***Design Office***	***Technical Data***	***Customer Services***
Component FIN*			mandatory*	
Component P/N	mandatory			
Component manufacturer	mandatory			
Criteria type		mandatory	mandatory	mandatory
Criteria ref		mandatory	mandatory	mandatory
Issue type	mandatory	mandatory	mandatory	mandatory

** For Component FIN, the field is mandatory when the Source Data Provider is "Technical Data" and the Source Data type is "FIN"*

AIRBUS

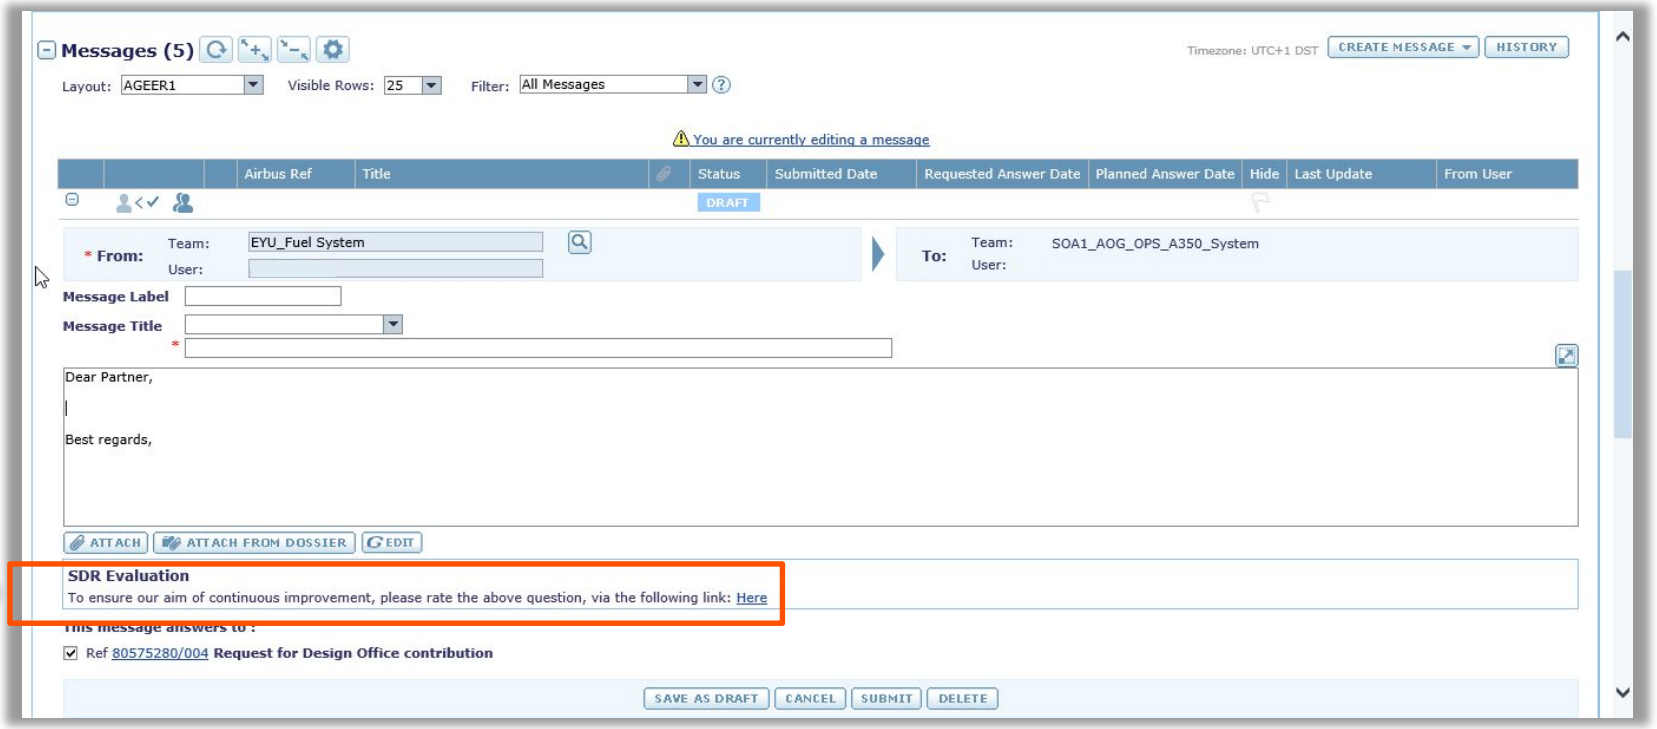
4

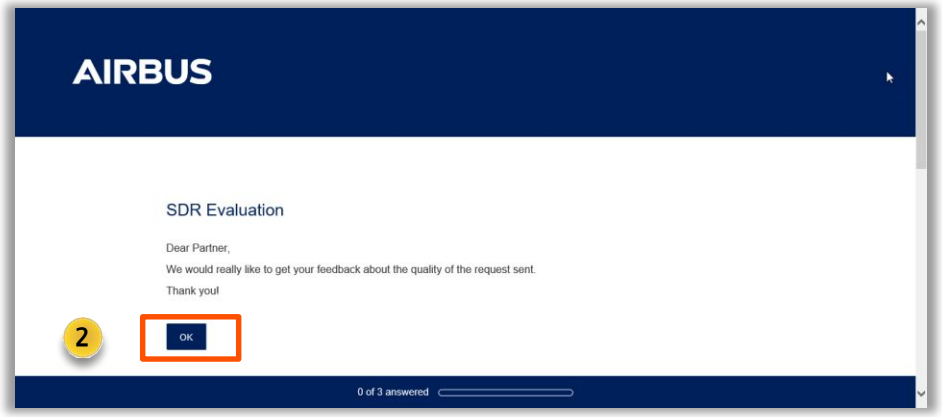
Evaluation of the request 1/2

Once a SDR is created, any contributor (TDE, DO, Supplier, ...) can evaluate the SDR relevance by replying to a message

1 Click on the hyperlink here to open and evaluate the request

2 On the displayed window, click on OK button to start the evaluation of the request.





*It is not mandatory. Nevertheless, to be able to take continuous improvement actions and decrease the number of non relevant SDR, your contribution is necessary, **the SDR being relevant or not**.*

It takes less than 1 minute.

AIRBUS

4

Evaluation of the request 2/2

1. Answer to the 1st question. If the answer is "**Not relevant**", you will have to answer to the next question.

2. Select the reason of the non relevance of the request. If you select "**Other**", you will have to add a comment

3. Add a comment to explain the "**Other**" choice

4. The evaluation of the request is done. Click on "**Done**" button to close the evaluation.

3

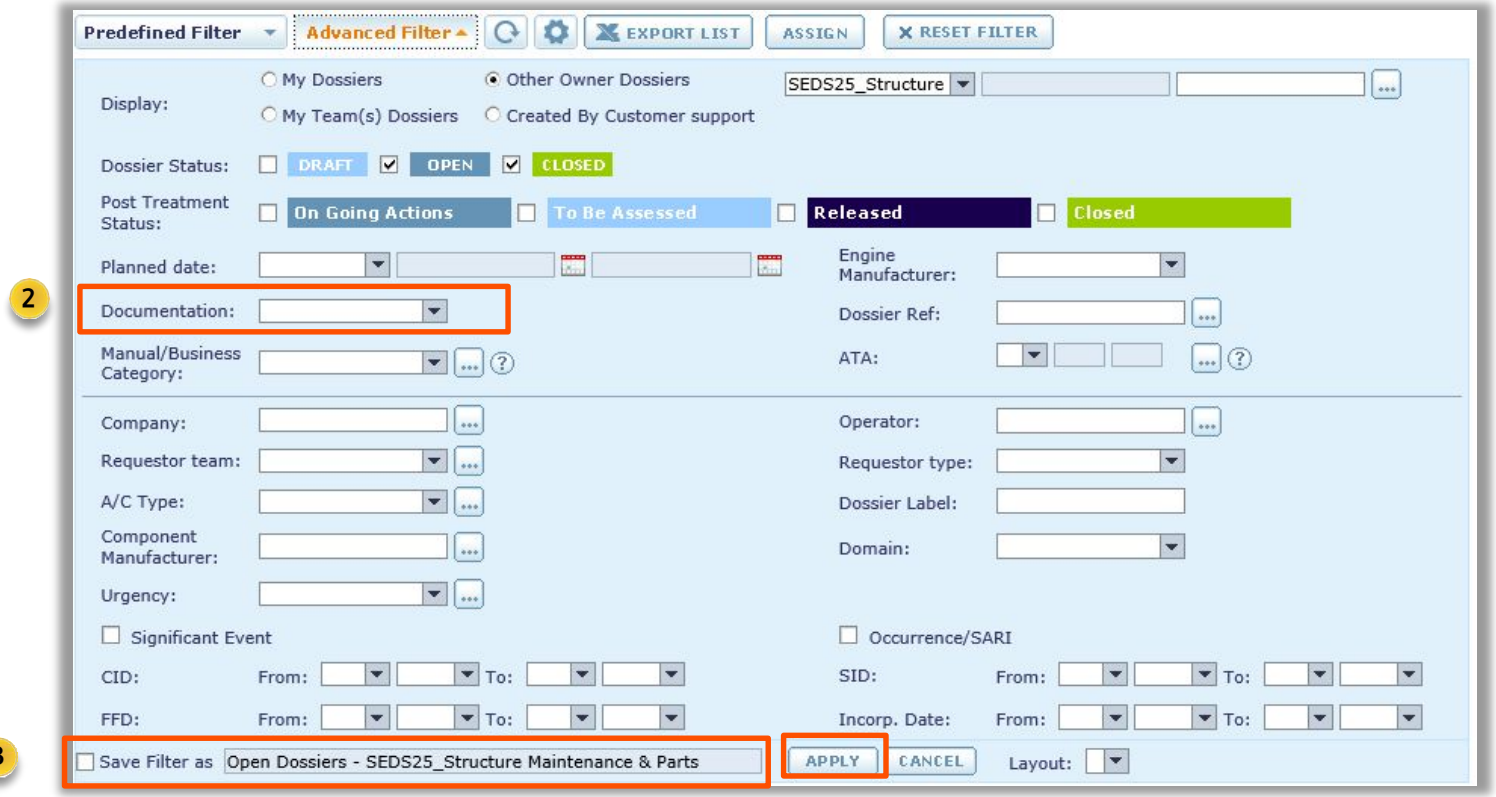
4

AIRBUS

5

Customization of the cockpit (1/2)

1. Use the “Advanced filter”
2. Select “SDR” in the Documentation field to display only SDR
3. Tick “Save Filter as” and name your filter. Apply.



The Documentation field is available on the following cockpits:

- *Doc content: Dossier*
- *Doc Content: Action follow-up*
- *Doc content: Dispatcher*
- *Doc content: Inbox*
- *Internal Requests: Dossier*

AIRBUS

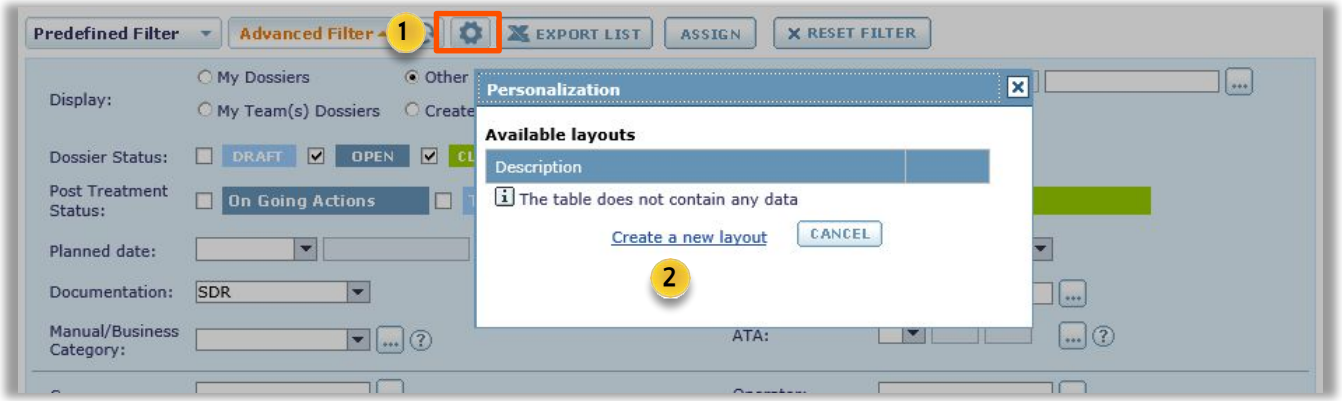
5

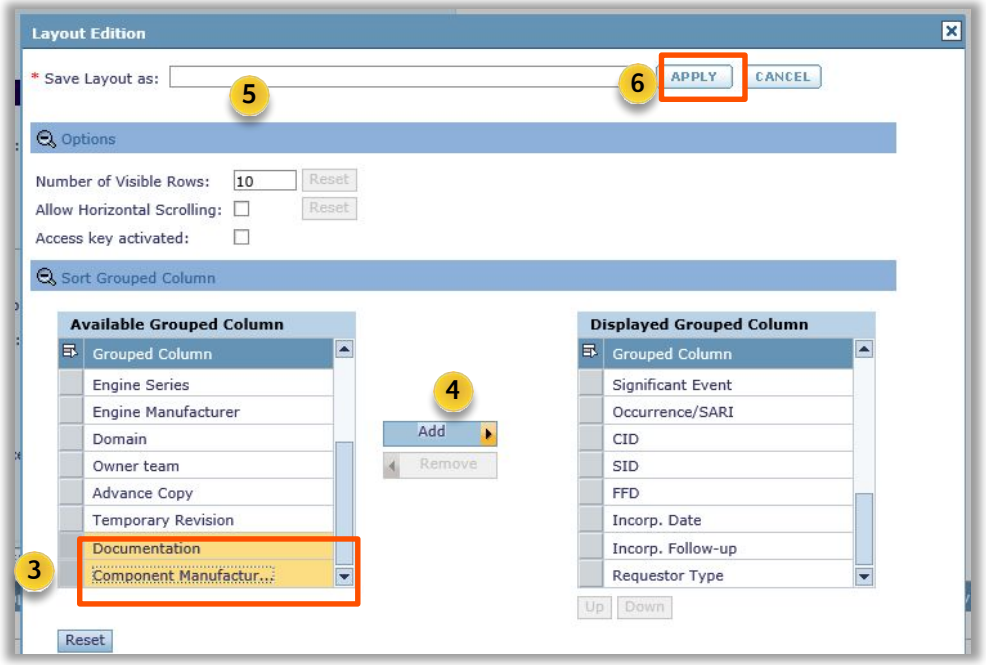
Customization of the cockpit (2/2)

Update the layout

1. Click on button to create or update a layout
2. Click on "Create new layout" to create your layout or select the layout you want to update
3. Select the Documentation and Component Manufacturer fields if you want to add them in the layout
4. Click on add button
5. Save your layout by adding a layout name
6. Click on Apply button to take into account your updates

You can create several layouts. Use the Up and Down buttons to update the display order.





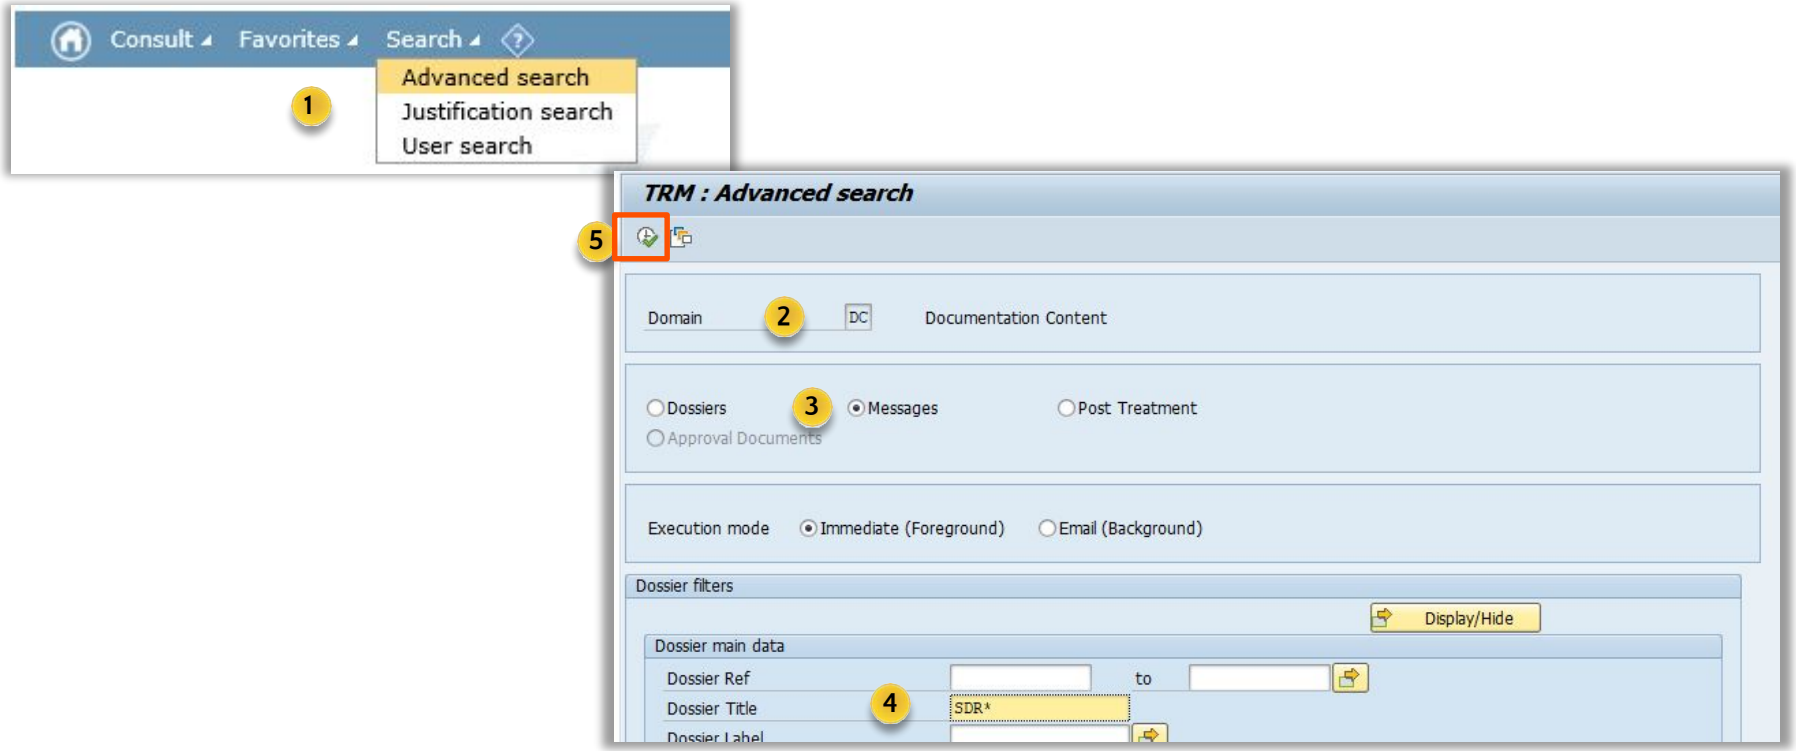
AIRBUS

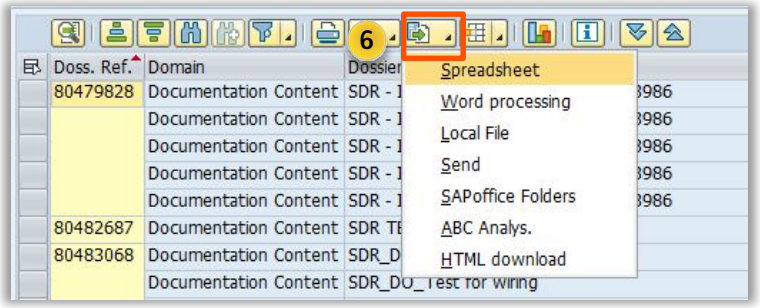
6

SDR Raw data extract

To be able to have the SDR with the old and the new template in the same extract, the Advanced Search has to be used.

1. Open the **Advanced Search**
2. Select **DC – Documentation content Domain**
3. Select if you want to extract the **Dossiers** or the **Messages**
4. Filter on Dossier title: **SDR***
5. Execute the search by clicking on **Execute** button
6. Extract the list of results by clicking on **Export** button and select **Spreadsheet.**





AIRBUS

Next steps – additional improvements to come in 2019

EIS SDR improvements

New way of working from the **22nd of April** on!

EIS SD MAP

Source Data MAP online: For each Source Data type, all information concerning the Source Data usage, acceptance criteria, location and planning will be displayed in the Source Data MAP

EIS Link WO-SDR

From TD 19.3, with the EIS of WP3 Pending Management:

- *Pending reasons harmonization between all workflow tools*
- *SDR automatic creation from a WO*
- *SDR Ref and URL available in the WO*
- *Possibility to link a SDR to an existing WO*
- *SD alerts in the WO*

April | May | June | July | Aug | Sept | Oct | Nov | Dec

2019

AIRBUS

Reminder

- Internal Requestors are allowed to request contribution from DO Engineers **no sooner than 12 weeks before the Authoring Cut-Off Date (ACD)** of the targeted revision, with appropriate key words (cf §8.1.3).

  The target answer date must not be earlier than **8 weeks before the Authoring Cut-Off Date (ACD)** of the targeted revision.
